1/13

Docker

© https://www.docker.com

Dockerfile

```
# Use an official Python runtime as a parent image FROM python:2.7-slim
```

Set the working directory to /app WORKDIR /app

Copy the current directory contents into the container at /app ADD . /app

Install any needed packages specified in requirements.txt RUN pip install --trusted-host pypi.python.org -r requirements.txt

Make port 80 available to the world outside this container EXPOSE 80

Define environment variable

FNV NAMF World

Run app.py when the container launches CMD ["python", "app.py"]

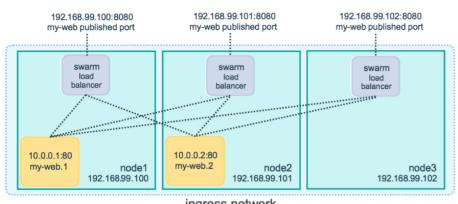

Балансировка нагрузки

docker-compose.yml

```
version: "3"
services:
  web:
    # replace username/repo:tag with your name and image details
    image: username/repo:tag
    deploy:
      replicas: 5
      resources:
         limits:
           cpus: "0.1"
           memory: 50M
      restart policy:
         condition: on-failure
    ports:
      - "80:80"
    networks:
      - webnet
networks:
  webnet:
```

Swarm-ы

Сборка в Docker

- ▶ Приложение: https://github.com/trikset/trikRuntime
 - ▶ Прошивка для робота, C++ с Qt
- Dockerfile: https://github.com/trikset/trikRuntime/blob/master/docker/Dockerfile
- .travis.yml: https://github.com/trikset/trikRuntime/blob/master/.travis.yml

Jenkins

- Continuous Delivery-система
 - Похожа на Travis, но более конфигурируема
- Работает локально
 - Следовательно, требует настройки и хостинга
 - Следовательно, может использоваться в корпоративном окружении
- Имеет кучу плагинов на все случаи жизни
- Опенсорсный, очень популярен по сей день
 - ▶ Начинался в 2005 в Sun как Hudson

Jenkinsfile

Более продвинутые шаги

```
pipeline {
  agent any
  stages {
    stage('Deploy') {
       steps {
         retry(3) {
            sh './flakey-deploy.sh'
         timeout(time: 3, unit: 'MINUTES') {
            sh './health-check.sh'
```

9/13

Jenkins и Docker

```
pipeline {
   agent { docker 'maven:3.5.2-jdk-8-slim' }
   stages {
      stage('build') {
      steps {
        bat 'mvn --version'
      }
    }
}
```

Переменные окружения

```
pipeline {
  agent any
  environment {
    DB ENGINE = 'sqlite'
    AWS ACCESS KEY ID = credentials('AWS ACCESS KEY ID')
    AWS SECRET ACCESS KEY = credentials('AWS SECRET ACCESS KEY')
  stages |
    stage('Build') {
      steps {
       sh 'printenv'
```

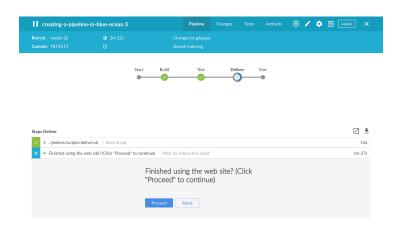

Слежение за тестами

```
pipeline {
  agent any
  stages {
     stage('Test') {
       steps {
          sh './gradlew check'
  post {
     always {
       junit 'build/reports/**/*.xml'
```

Деплой, ручное подтверждение

```
pipeline {
  agent any
  stages {
    stage('Deploy - Staging') {
       steps {
         sh './deploy staging'
         sh '/run-smoke-tests'
    stage('Sanity check') {
       steps {
         input "Does the staging environment look ok?"
    stage('Deploy - Production') {
       steps {
         sh './deploy production'
```
